

SETUP GUIDE

GoldScalper v3 Complete Setup Guide

Step-by-step instructions for cloning the repository, installing the EA on Deriv MT5, configuring all parameters, and understanding the strategy logic.

EA: GoldScalper_v3.mq5 **Broker:** Deriv MT5 **Symbol:** XAUUSD M1 **Version:** 3.3

Repo: github.com/jmac17ba/goldscalper-ea

TABLE OF CONTENTS

- 1 Prerequisites
- 2 Clone the repository
- 3 Install the EA on Deriv MT5
- 4 Compile in MetaEditor
- 5 Configure input parameters
- 6 Attach to chart and go live
- 7 Strategy explained
- 8 Optional — Telegram alerts
- 9 Troubleshooting

1 Prerequisites

A Deriv MT5 account

Create a free account at deriv.com. Download and install MetaTrader 5 (Deriv). A demo account works fine for testing.

B Git installed

Download from git-scm.com. After install confirm it works:

```
git --version
```

C MetaEditor (bundled with MT5)

Installed automatically with MT5. Open it from MT5 via Tools → MetaEditor or press F4.

✓ Recommended starting balance: \$500+ on a demo account before going live.

2 Clone the repository

1 Open a terminal (Command Prompt or PowerShell)

Windows: press Win + R, type `cmd`, press Enter.

2 Clone the repo

Downloads the EA and all settings into a new folder:

```
git clone https://github.com/jmac17ba/goldscalper-ea.git
```

3 Confirm the files are there

```
cd goldscalper-ea  
dir
```

You should see `GoldScalper_v3.mq5` and `README.md`.

! The README.md in the repo contains a quick-reference version of this guide.

3 Install the EA on Deriv MT5

1 Open the MT5 data folder

In MT5: File → Open Data Folder. A Windows Explorer window opens.

2 Navigate to the Experts folder

```
MQL5 → Experts
```

3 Copy the EA file

Copy `GoldScalper_v3.mq5` from your cloned folder into the Experts folder.

4 Refresh in MT5 Navigator

View → Navigator → right-click Expert Advisors → Refresh. The EA appears in the list.

⚠ Do NOT rename the file. The EA uses internal naming for chart objects and session files.

1 Open MetaEditor

In MT5 Navigator: double-click `GoldScalper_v3` under Expert Advisors. MetaEditor opens with the source.

2 Compile

Press

F7

or click the green Compile button in the toolbar.

3 Check the result

The Errors/Warnings tab at the bottom should show *0 errors, 0 warnings*. If errors appear, paste them into Claude to fix.

✓ A successful compile creates a .ex5 file in the same folder — that is the runnable binary MT5 uses.

Use these exact values when attaching the EA. All settings are optimised for XAUUSD M1 on Deriv.

Parameter	Value	Description
BaseLot	0.01	Lot size for initial straddle entries
TargetProfitUSD	0.45	Profit target (price units) for single-position closes
MagicNumber	9000001	Unique EA identifier — do not change
StopOffsetPips	5.0	Pips above/below price to place straddle stop orders
MaxOpenPositions	12	Hard cap on simultaneous open positions
RecoveryGapPips	12.0	Gap between each Fibonacci recovery level
MaxRecoveryLevel	6	Maximum number of recovery levels to add
TrendLookback	5	Candles to evaluate before allowing a new straddle
TrendMaxSame	4	Block straddle if 4+ same-direction candles in a row
TrendMaxRangePips	20.0	Block straddle if recent range exceeds 20 pips
SessionProfitTarget	100.0	Stop EA when session profit reaches \$100
SessionLossLimit	-150.0	Stop EA when session loss reaches -\$150
HardFloorUSD	-200.0	Close ALL positions immediately if equity drops \$200
TelegramToken	""	Optional — paste your Telegram bot token (see Section 8)
TelegramChatId	""	Optional — paste your Telegram chat ID

6 Attach to chart and go live

1 Open an XAUUSD chart on M1

In MT5: File → New Chart → search for XAUUSD. Change the timeframe to M1 using the toolbar.

2 Drag the EA onto the chart

Navigator → Expert Advisors → drag `GoldScalper_v3` onto the chart. The settings dialog opens.

3 Enter parameters from Section 5

Switch to the Inputs tab. Enter each value exactly as shown in the table above.

4 Enable AutoTrading

Click OK. Then click the AutoTrading button in the MT5 toolbar until it turns green. The EA name appears in the chart's top-right with a green dot.

5 Verify in the Experts tab

Bottom of MT5 → Experts tab. You should see: *GoldScalper v3 loaded* and straddle placement messages.

✓ Green smiley face on the chart = EA running. Grey face = AutoTrading is off.

7 Strategy explained

ENTRY METHOD

Straddle — BUY STOP above + SELL STOP below current price each bar. Whichever triggers first, the other cancels.

RECOVERY LADDER

If a trade moves against you, new positions open every 12 pips at Fibonacci lot sizes (0.01 → 0.02 → 0.03 ...).

BASKET TP

Recovery basket closes when price returns to the entry of the most recently added level. All positions close together.

TREND FILTER

No new straddless when 4+ consecutive same-direction candles detected. Avoids entries in strong trends.

Fibonacci lot ladder:

L1: 0.01

L2: 0.02

L3: 0.03

L4: 0.05

L5: 0.08

L6: 0.13 (max)

Session stops automatically when profit reaches +\$100 or loss reaches -\$150. Hard floor closes all positions if equity drops -\$200.

8 Optional — Telegram alerts

1 Create a Telegram bot

Search for `@BotFather` in Telegram. Send `/newbot`, follow the prompts, copy the token it gives you.

2 Get your Chat ID

Message your bot once, then open this URL (replace TOKEN):

```
https://api.telegram.org/botTOKEN/getUpdates
```

Find `"chat":{"id":XXXXXXXX}` — that number is your Chat ID.

3 Enter in EA settings

Paste the token into `TelegramToken` and your Chat ID into `TelegramChatId` when attaching the EA.

9 Troubleshooting

✕ Grey smiley / EA not trading

AutoTrading is off. Click the AutoTrading button in the MT5 toolbar until it turns green.

✕ Compile errors in MetaEditor

Copy the exact error text from the Errors tab and paste it into Claude: "Fix this MQL5 compile error: [error]"

✕ EA stops after first session

Normal — the session profit or loss limit was hit. Remove the EA and re-attach to start a new session.

✕ No trades opening

The trend filter is blocking entries. Normal in strongly trending markets — it resumes when the market calms.

✕ Spread filter blocking trades

Spread spiked during news. EA waits until spread drops below MaxSpread (20 pts). Avoid trading during major news events.
